

PC-BSD Changelog

Saturday, 22 September 2007

PCBSD 7.0.2 - Changelog (12-10-08)

- * Updated KDE to 4.1.3
- * Improved the Online Updater tool, to support proxy servers, and use custom TMPDIR - 2940 - 2941 - 2942 - 2944
- * Added KDE4 startup script for nvidia cards, which improves performance with desktop lag, and compositing effects - 2943
- * Updated sound-detect script to support several new cards - 2945 - 3018
- * Fixed a series of bugs in the System Manager tool - 2949
 - Fixed occasional crash when using portsnap
 - Fixed bug preventing clicking of "apply" after changing settings
 - Fixed bug loading bootup splash screen images
- * Fixed a bug with occasional hang's at shutdown, due to hung knotify4 processes - 2959
- * Fixed installation issues when trying to install PC-BSD to free disk space, and the partition does not yet exist - 3034
- * Upgraded HAL to 0.5.11_8 which fixes errors when trying to eject optical media in KDE4 and improves NTFS-3G support - 3027
- * Fixed a problem with scanner permissions preventing user scanning - 2938
- * Fixed bug performing PBI updates, which removed the old PBI - but didn't always install the new one - 2932
- * Put a check in place to prevent using ZFS with less than 1GB of system memory - 2962

PCBSD 7.0.1 - Changelog (10-17-08)

- * Updated KDE to 4.1.2
- * Update Nvidia driver to 177.80 - SVN: 2868
- * Fixed various bugs causing crashes with System Updater - SVN: 2780 , SVN: 2790 , SVN: 2908
- * Fixed bugs with partitions becoming mis-aligned due to incorrect sizing - SVN: 2809 , SVN: 2810
- * Added support for NTFS writing directly in KDE4 - SVN: 2811
- * Fixed sound detection for ALI M5451 PCI Audio Device - SVN: 2821
- * Fixed out of memory errors when installing on 256MB of RAM - SVN: 2825 , SVN: 2827 , SVN: 2828
- * Added new KMenu->System->Display Setup Wizard icon to re-run the X Setup tool - SVN: 2832
- * Added support for linux-flashplugin9 to the default install for i386 and amd64 - SVN: 2850 , SVN: 2851
- * Fixed an error about setting up Xorg for QEMU on install - SVN: 2848
- * 7.0.1 now includes all the KDE l10n packages by default, allowing users to switch languages and locales "on-the-fly" - SVN: 2877
- * Fixed a bug which caused a sound-detection error notification by mistake when the user was running an alternative OSS - SVN: 2901
- * Fixed the Wifi tool to work with very long SSID's and ones with multiple spaces in the name - SVN: 2895
- * Updated the Wifi tool to allow network profiles, and connect to the best available network - SVN: 2904
- * Added a new System Updater launcher to the System Settings utility - SVN: 2906
- * Added support to xorg-gui to allow user to run radeonhd driver - SVN: 2909
- * Corrected some apps showing up in their respective kickoff directory - SVN: 2910

PCBSD 7 - Changelog (9-15-08)

- * Updated KDE to 4.1.1
- * Updated Nvidia driver to 177.70 (beta)
- * Updated included Quick-Guide to version for 7
- * Added additional ATH wifi device support
- * Fixed BSDStats reporting
- * Improved Xorg setup of ATI cards, should enable DRI for more systems
- * Updated installer to support all varieties of passwords, including spaces and special characters
- * Fixed detecting and using SSID's with a space in the name
- * Fixed initial login sound playback
- * Updated USB install to support FAT formatted USB sticks
- * Fixed numerous other bug reports from previous betas

PCBSD 7-BETA1 - Changelog (8-28-08)

- * Updated to FreeBSD 7-STABLE for the base.
- * Updated to KDE 4.1.
- * New options to install from DVD, USB or Network/Internet.
- * New optional file-system selector during install.
- * New options for keyboard setup, including localized layout setup.
- * Support for ZFS, UFS2, UFS2+Softupdates, and UFS2+Journaling
- * ULE Scheduler improves system performance and responsiveness.
- * Greatly expanded hardware support.
- * Updated sound-detection routine, with new GUI for reporting problems.
- * Improvements to WiFi detection and WEP setup.
- * Improvements to PBI installation, adds more information to kmenu entries.
- * Dual-head option in XGUI tool.
- * Improved Add / Remove optional components support, install via internet.
- * Improved support and stability for Wine.
- * Fail-safe mode which loads X in vesa mode on running system.
- * Monitor / Video card identification in X GUI setup tool.
- * Improved support for creating multiple partitions across a primary slice.
- * Improved PBI thumbnailer, now displays embedded icons for large PBIs properly.
- * Updated entire PC-BSD toolset to QT4 / KDE4.

PCBSD 1.5.1 - Changelog (4-23-08)

- * Bugfixes to the PBI removal tool - Removes /Programs/<ProgDir> consistently now.
- * Added detection for NFE / MSK networking cards on install CD
- * Added GutenPrint support for additional print drivers
- * Added additional fonts to Xorg
- * Updated the PolicyKit configuration for latest HAL improvements
- * Fixed SMP support in default kernel configuration
- * Bugfixes to the new SystemUpdater tool - Download more than 4 patches without a failure.
- * Fixes to the wifi config GUI, works properly with extra-long SSID names
- * Added Lipstik theme to root profile for consistent UI experience.
- * Updated the installed ports to latest as of 4-16-08.
- * Updated i18n support to latest from 4-14-08
- * Updated Quick-Guide, including PDF version.

PCBSD 1.5 - Changelog (3-12-08)

- * NEW System Updater tool - Keeps system & PBIs up to date - Allows override variables, so that admins can use their own mirrors / servers to roll out updates to users.
- * NEW sound detection program! Uses XML backend to identify and load modules
- * NEW amd64 build of 1.5, including PBIs that are on our auto-build server
- * NEW PBI icon preview library, now a PBI file shows the embedded icon on your desktop, not the generic "PBI" format icon
- * Xorg 7.3
- * KDE 3.5.8
- * FreeBSD 6.3 Release
- * Improvements to WiFi tool, BSSID support and better SSID support
- * Improvements to the PBI Removal tool - Faster startup & remove a list of PBIs at a time
- * Improvements to the firewall manager

PCBSD 1.4.1.2 - Changelog (1-04-08)

- * Updated the included NVIDIA drivers to 169.07

PCBSD 1.4.1.1 - Changelog (12-03-07)

- * Upgraded printing system CUPS to version 1.3.3
- * Fixed missing foomatic data for hpijs printers
- * Added GutenPrint for additional printer support
- * Upgraded base OS to FreeBSD 6.3-PRERELEASE (Latest 6-STABLE)

PCBSD 1.4.1 - Changelog (11-16-07)

- * Upgrades Compiz 0.5.2 to Compiz-Fusion 0.6.0
- * Switches from HPIJS to HPLIP for better printer / scanner support.
- * Adds extra screen savers with X-Screensaver package
- * Updates NVIDIA drivers to latest releases from NVIDIA.
- * Updates GTK / Pango libraries to latest in ports
- * Fixes some misc bugs with PBI Removal tool, and Network manager.
- * Fixes issue with "tar" extract error during install when using custom partitioning.
- * Switches ISO to LZMA compression, speeding up the install and reducing the size of the CD ISO image.
- * Fixed bug with some of doc files have unreadable permissions
- * Added anacron config into base system
- * Fixed bug starting the PCBSD Updater tool

PCBSD 1.4 - Changelog
9-24-07 (Kris Moore)

- * Updated FreeBSD base OS to 6.2-STABLE
- * Updated Xorg to version 7.2
- * Updated KDE to 3.5.7
- * Added Compiz-Fusion 0.5.2, replacing Beryl
- * Includes support for Flash7 in native BSD browsers. (Konq, Opera, FireFox)
- * Includes official NVIDIA drivers to simplify activating HW acceleration.
- * Put checks into place for the installer, so when you do an upgrade and delete PBI components such as Firefox / Opera, it doesn't replace one on the HD already.
- * Added ipw module / firmware to system, for Intel 2100 wifi cards
- * Changed XGUI box to use 1024x768 in combo box by default
- * Fixed "/" on upgrade
- * Fixed "avahi" user missing on upgrade
- * Put fix into place so that kxkbrc tool is updated with right key layout. (jp106 & abnt2)
- * Added tcsh to installer, so now you can use uparrow at shell prompt.
- * Fixed Japanese / Chinese support, so they can both exist at same time
- * Now detects "msk" driver NIC's.
- * Allow multiple component selection.
- * Fixed many reported bugs from 1.4BETA in the following tools:
 - Network Manager
 - Xorg Configuration GUI
 - Custom partition via Installer
 - Xorg configuration now auto-detects DPI
- * Included i18n support with latest translations from Pootle as of 9-20-07
- * Fixed PC-BSD specific tools to now use native languages properly.
- * Added hpijs to support a wider variety of HP hardware
- * Added new KDM theme for a nicer login window.
- * Fixed bugs with optional packages on CD 2
- * Updated Wine system patches to current versions as of 9-20-07
- * Fixed XML menuing system so Wine apps don't appear in "lost+found" anymore.
- * Fixed up support for PPPoE backend, improving config file generation via GUI.
- * Fixed numerous bugs with "upgrading" an existing PC-BSD installation.
 - Upgrading now preserves all sym-links created by PBIs
 - Upgrading is now faster, and doesn't need to compress the user home dirs.
 - Upgrading now properly saves kmenu icons and updates for any new ones.
- * Improved & Simplified system installer, now with the ability to load optional components from CD2

- * NEW! Network configuration manager, including tray apps for WIFI and ethernet connections
- * NEW! Firewall Manager, enables easy GUI configuration of firewall settings
- * NEW! Xorg GUI Configuration tool, allows easy setup of screen resolution & 3D support
- * NEW! Added support to Add / Remove programs tool to easily install optional KDE / System components
- * NEW! User manager GUI
- * NEW! Battery Tray Application for Laptops
- * Numerous fixes / tweaks to KDE configuration, making downloading & running PBIs easier

PCBSD 1.3.4 (Online Update Only) - Changelog
4-18-07 (Kris Moore)

- * Updated HAL daemon to 20070403, fixing issues mounting removable media.
- * Updated CUPS to version 1.2.10, which improves printing support.

PCBSD 1.3.3_1 (Online Update Only) - Changelog
3-7-07 (Kris Moore)

- * Applied FreeBSD patch 07:04 which corrects issues with Daylight savings
- * Updated the PC-BSD Guide

PCBSD 1.3.3 (Online Update Only) - Changelog
2-12-07 (Kris Moore)

- * Updated HAL to latest version: 0.5.8-20070210
- * Updated kdebase to latest version: 3.5.5_4
- * Applied FreeBSD security update SA-07:02
- * Changed bsdstats script to run check daily

PCBSD 1.3.2 (Online Update Only) - Changelog
1-19-07 (Kris Moore)

- * Updated alias.conf file
- * Updated PBI Removal tool to support PBI Creator 3.0 files
- * Fixed issue with devfs.rules and local printer support
- * Changed default Icon for PBI Removal Tool
- * Fixed issues on some systems removing desktop icons after PBI deletion
- * Upgraded Start menu button background image
- * Updated /etc/rc.d/jail startup script for FreeBSD-SA-07:01

PCBSD 1.3.01 (ISO & Online Update) - Changelog
1-9-07 (Kris Moore)

- * Updated HAL to latest version in Ports. (0.5.8.20070104)
- * Added xscreensaver-kde port
- * Updated PCInstall code with fixes for extended partitions. (Bug #355, Feature Request #203, Bug #334)
- * Updated enable.sh script for HAL in Services tool. (Bug #367)
- * Updated kcmPBSystem module with fixes Tim made recently (Bug #353)
- * Created /PCBSD/browser_plugins directory, and made it a default in KDE
- * Added Arabic language to installer
- * Fixed issue with changing the video card on install CD to "vesa". (Bug #372)
- * Updated version of CrashHandler which fixes leaving .files in your home dir.
- * Implemented Feature Request #148 - Documents path now defaults to /home//Documents/
- * Fixed issue running PBIs directly from CD. The "noexec" flag is now disabled by default.

PCBSD 1.3 (ISO Only) - Changelog
12-31-06 (Kris Moore)

- * Upgraded system to KDE 3.5.5
- * Fixed issues with connecting to CUPS for printing

- * Added HAL support for default media backend
- * Added ability to user-mount disks in HAL
- * Cleaned up Konquerors default look-n-feel for web browsing
- * Fixed issues with toolbar colors and sidebar colors
- * Added support for running Flash content on native BSD browsers
- * Added more options to services menu to disable / enable system services
- * Fixed bug with errors while running in single user-mode
- * Fixed output of system installer while running upgrade

PCBSD 1.3RC1 - Changelog 12-11-06 (Kris Moore)

- * Fixed icon size issues in KMenu
- * Installer now does not display extended partitions.
- * Installer now can use empty primary partition space to install.
- * Fixed issue with BSDStats not properly reporting usage.
- * Fixed problem with "Start" icon text not being translated properly.
- * Fixed issues when using installer to upgrade system from 1.2 -> 1.3.
- * Closed numerous other issues from BETA2, see this URL for more details: <http://tinyurl.com/yyoplg>

PCBSD 1.3 (BETA2) - Changelog 11-26-06 (Kris Moore)

- * Fixed numerous bugs reported from the BETA1 release.
- * Implemented support for installing under different languages.
- * Switched to "Crystal Clear" icon set for default install.
- * Updated versions of some ports in base system.

PCBSD 1.3 (BETA1) - Changelog 10-18-06 (Kris Moore)

- * Brand-new system install wizard.
- * Install CD boots into RAM for switching CD' during install process.
- * New visual Look-n-feel for default PC-BSD.
- * Added Fluxbox / Idesk for "server" profile. (Available in kdm for desktop users)
- * Installer allows multiple users to be added.
- * Advanced Options in Installer - Setup Firewall / Network / Custom Partitions.
- * New X detection setup.
- * New sound-detection setup.
- * Included Quick Guide on desktop.
- * Added new default startup / shutdown splash screens.
- * Running KDE 3.5.4.
- * Included gtk-qt-engine for GTK visual effects.
- * Added support for drive mirroring.
- * Included BSDStats (Optional)
- * Denyhosts is now optional for SSH security.
- * SMP kernel is auto-detected and setup automatically.
- * Numlock enabled for desktops.
- * Created /etc/pf.inports file for opening firewall ports.
- * For full package list, see release notes.

PCBSD 1.2 - Changelog 7-12-06 (Kris Moore)

- * Updated ports to current as of 6-26-06.
- * Added py-qt and py-kde ports to default install. (Allows Super Karamba plugins to work)
- * Cleaned up icons folders.
- * Added DBSD Network / User Toolset into Control Panel.
- * Convert PC-BSD tools to Control Panel modules.

- * Update KMenu to display categories.
- * Ctrl-alt-delete now launches the System Guard.
- * Zip support included in default install.
- * Added Bash to default install.
- * Removed EISA support from default kernel.
- * Setup CD insert notification to allow playing audio CD's and DVD's.
- * Added denyhosts to default install for SSH security.
- * Windows key now launches "K-Menu".
- * Removed wireless support from install CD. (Fixes possible crash when detecting sound card)
- * Fixed bug with online update not working in languages other than english.
- * Removed the "Computer" kmenu opting for "System Menu" instead.
- * Changed default color scheme.
- * Changed desktop icons default to 32x32.
- * NTFS partitions are now mounted as Read-Only.
- * Write access to CD devices for user accounts granted.

PCBSD 1.11a - Changelog

6-25-06 (Kris Moore)

- * Fixed issues with compat5x libraries not working.
- * Fixed problem with online updater showing available updates when none are available.

PCBSD 1.11 - Changelog

6-13-06 (Kris Moore)

- * Updated installed ports to current versions as of 6-12-06
- * Updated KDE to 3.5.3
- * Removed linux-base-rh9 port from default install, allowing PBI developers to install their own. (Not removed from patch update)
- * Added additional video drivers to default kernel. (Intel 3D, Voodoo, etc)
- * Adding users now uses the /usr/share/skel template.
- * Cleaned up fonts, uses Sans Serif family by default now.
- * Allowed users to change account icon in kdmrc
- * Changed console resolution to 800x600
- * Cleaned up /etc/resolv.conf
- * Fixed IPV6 hostname in /etc/hosts

PCBSD 1.1 - Changelog

5-28-06 (Kris Moore)

- * Updated core OS to FreeBSD 6.1.
- * Added "nve" devices to DHCP network detection.
- * Fixed network manager to restart network after settings change.
- * Added extraction test to installation CD - Now warns on failed install.
- * Upgraded Online Update Utility to display status + plus major bugfixes.
- * Added DRM / ATI support to default kernel.
- * Misc bugfixes.

PCBSD 1.0 - Changelog

4-28-06 (Kris Moore)

- * Now running KDE 3.5.2.
- * Kaffeine is now the default media player for audio / video.
- * PC-BSD now auto-detects when a media has been inserted into a CD / DVD drive.
- * When a CD is inserted, an icon shows up on the desktop for unmounting / ejecting.
- * When a USB flash drive is connected, an icon shows up on the desktop for unmounting.
- * Changed much of the backend with fonts and language support.
- * Tools now look like KDE with same fonts.
- * Graphical Improvements to the Installer.
- * Added new "Utilities" menu on CD install, for chroot and shell prompts.
- * Create desktop Icons to pbidir.com and pcbsd.com.
- * Set default profile on Konqueror for web browsing.
- * Added Search bar to Konqueror.

- * Partitions now have "Softupdates" enabled.
- * Online Update check at bootup can now be disabled.
- * Many numerous bugfixes.

PCBSD 1.0RC2 - Changelog 1-20-06 (Kris Moore)

- * Updated Core FreeBSD with latest security patches.
- * Upgraded KDE to 3.5
- * Fixed loading of "kcm fileshare" KDE module.
- * Online update checker now runs at system startup.
- * Only appropriate sound module is loaded now.
- * Disabled DMA support during system installation process.
- * Some special characters are now prohibited from password creation.
- * Many packages have been updated to current versions.
- * System tool now uses portsnap to update ports.
- * New PBI Crash Handler.
- * Fixed kdmrc out of date message at boot.
- * Misc bugfixes.

PCBSD 1.0RC1 - Changelog 11-21-05 (Kris Moore)

- * Added PBIdelete program - Lets users remove PBI's from the command line.
- * Added process to sanitize bios geom, from sysinstall source for system install.
- * Added new "Update" mechanism for PBI's, developers can now specify update URL for checking version numbers.
- * Added text install mode for PBI's with "-text" option.
- * Bugfix version of the UserManager.
- * Fixed USB bad mount-points.
- * Updated visual look-n-feel of KDE, fonts, graphics, etc.

PCBSD 1.0RC1 - Changelog 11-10-05 (Kris Moore)

- * Upgraded the base OS to FreeBSD 6.0.
 - This core update provides a much needed UI performance boost, and now works with much more hardware.
 - For more information on this release of FreeBSD 6, please see www.freebsd.org
- * Added a graphical Language / Keyboard selector at beginning of installation process.
 - Lets users select the install & system language they wish to operate under.
 - Also allows keyboard models / maps to be selected, for a wide range of functionality.
- * Added the Network Manager utility.
 - Lets users control and modify their network adapters, setting values such as IP addresses, Netmask, DNS, Gateway, and Host name.
- * The system now ships with Linux Binary Compatability pre-installed.
 - Having this package pre-installed means that users can now download and run PBIs of software such as Flash support, or Java for Linux.

- * Backward Compatible with PBI's made for previous versions of PC-BSD.
 - Users can install and run the same PBI's created for their prior versions of PC-BSD, no recompile necessary.
- * System reinstall required.
 - This release is a major step up from previous PC-BSD's, so a reinstall will be required. No online update patch will be issued for 0.8.3 -> 1.0RC1
- * Upgraded KDE to version 3.4.3
- * Changed cursors on Install CD
- * Anti-Aliasing is now enabled by default
- * Added "Greek" to lanaguage selection menu

PCBSD 0.8.3 - Changelog 10-22-05 (Kris Moore)

- * Added auto-run daemon for CD's (Checks for autorun.pbi file after CD is mounted)
- * PC-BSD installer is now 1 CD, with optional 2nd CD for language packs
- * Fixed major FDISK issue (Problem with geometry on some HD's, preventing bootup)
- * Added option to run GUI installation in 1024x768 mode
- * Improved visuals with new default cursor / wallpaper scheme
- * Fixed bug with "cancel" not working when prompting for format during install.
- * Added a beta version of the PC-BSD command-line registry program
- * Updated user-manager
- * Added several new languages including Japanese, Ukrainian, and Chinese Traditional.

PCBSD 0.8.2 - Changelog 9-23-05 (Kris Moore)

- * Fixed the mountroot issues after installation.
- * Fixed problems with PBI's not installing when a whitespace is in the path.
- * Updated the scripts used for online update manager.
- * Added SMP support to kernel.

PCBSD 0.8.1 - Changelog 9-19-05 (Kris Moore)

- * Fixes many issues with bootup after installation.
- * Fixed problems with Online Update Manager.
- * Updated UserManager.
- * Added Russian and Bulgarian Support.
- * Activates HD swap space during installation for lower memory systems.
- * Slimmed down KDE 3.4.2 by removing Games / Graphics / PIM ports, which can be optionally installed via PBI.

PCBSD 0.8 Beta - Changelog 9-11-05 (Kris Moore)

- * Upgraded KDE to 3.4.2
- * NEW! Online Update Manager
- * NEW! Online Update Scheduler
- * Add Users GUI
- * Better sound detection
- * PBI's now installed to /Programs
- * Keyboard Layout Selector

- * Able to use "sysinstall" fdisk utility for advanced disk editing.
- * Detect EXT2 Linux partitions for mounting
- * Multiple Languages now supported
 - English
 - Catalan
 - Danish
 - German
 - Spanish
 - Estonian
 - French
 - Croatian
 - Hungarian
 - Dutch
 - Norwegian
 - Polish
 - Portuguese
 - Portuguese (Brazilian)
 - Swedish
 - Chinese Simplified
- * Fixed issues relating to BSDLabel
- * Cleaned default desktop
- * All PC-BSD configuration settings now on KMenu

PCBSD 0.7.8 Beta - Changelog 7-18-05 (Kris Moore)

- * Upgraded KDE to 3.4.1
- * Added full printer support to KDE
- * Fixed non-executable .pbi issues
- * Samba Module now works in KDE Control panel
- * Added USB disk/flash drive auto-detection
- * PC-BSD now auto-detects CD and Disk drives during bootup, and populates the "Computer" directory accordingly.
- * Enabled the CUPS daemon
- * Enabled the SMB daemon
- * Fixed issues adding slices
- * Fixed problem stamping MBR
- * Reorganized the KDE launch menu.
- * Reorganized the "Computer" Icon on desktop, and placed it on launch menu.
- * Changed loader.conf options to help fix problems writing to some HD's
- * Fixed shutdown, PC-BSD now turns off hardware automatically

PCBSD 0.7.5 Beta - Changelog 6-24-05 (Kris Moore)

- * Released PC-BSD code under BSD License!
- * Added custom-partitioning to PC-BSD Installer.
- * Added new Text Menu before Installation.
- * Added multiple-language support.
- * Fixed issues with sound system device busy issues.
- * Fixed issues with dial-up support.
- * Fixed issue with removing packages - manager now waits for scripts to finish.
- * Fixed KDE menu layout, now when choosing program to open with, it lists properly.
- * Added many other lanaguage packs to KDE.
- * Fixed screen-saver issues.
- * Added "Emergency-Shell" option to installation text menu.
- * Added option to reset XF86Config file to "vesa" driver during installation.
- * Added following languages: de, fr, es, es_LA, pt, pt_BR.
- * changed default splash screen.
- * cleaned up install CD for a smaller image.
- * Changed look-n-feel of install program.
- * Updated Window decorations for KDE.

- * Updated default Icon set for KDE.

PCBSD 0.7 Beta - Changelog 5-13-05 (Kris Moore)

- * Upgraded core OS to FreeBSD 5.4-Release
- * Cleaned up look & feel of installer
- * Boot loading screen added
- * KDE Defaults added
- * System auto-login enabled
- * Improved package creator / installer
- * Launch menu icons for installed programs now appear on all users desktops
- * MIME-Types now register properly with package installer
- * Added loading splash screen to package installer
- * Created Add-Users Dialog for easy setup including KDE Defaults

PCBSD 0.6 Beta - Changelog 5-01-05 (Kris Moore)

- * Create beta version of PC-BSD Program Manager.
- * Address issues related to systems with dual-drives, and setting up MBR.
- * Fix how installer sees free space for partitioning.
- * Added confirmation dialog to the "cancel" button in installation program.
- * Gave users permission to mount CD's as non-root.
- * Created CD device icon within KDE.
- * Integrate PC-BSD package manager into desktop.
- * Created PC-BSD Program installer.
- * Created PC-BSD Package Creator.
- * .pbi extension integrated into KDE desktop.
- * Created "My Computer" icon.
- * Populated "My Computer" with hard disk devices and CD's.
- * Auto-Hide fluxbox Taskbar during install

PCBSD 0.5a Beta - Changelog 4-18-05 (Kris Moore)

- * Spelling error fix for installer
- * Fixed network card autodetection

PCBSD 0.5 Beta - Changelog 4-15-05 (Kris Moore)

- * Initial Release of PCBSD 0.5 Beta
